

## CLIENT PREPARATION GUIDE

# AI Bot onboarding prerequisites

Prepare these details before opening the onboarding form. Complete and approved information helps AiFrogi configure the right persona, build a trustworthy knowledge base, test customer journeys and activate your bot faster.

## YOUR PREPARATION GOAL

One approved business profile, one clearly defined bot purpose, trustworthy knowledge, installation access and a responsible owner for review.

## What happens after you submit

### 1. REVIEW

AiFrogi checks business identity, bot category and required fields.

### 2. BUILD

Approved information is converted into structured, traceable bot knowledge.

### 3. PREVIEW

You test the actual answers, journeys, refusals and human handover.

### 4. INSTALL

You receive website script, iframe, WordPress guidance and a standalone bot link.

### 5. ACTIVATE

After installation detection and final approval, Super Admin enables the bot live.

## Before you begin

- ☐ Nominate one business owner who can approve facts and one technical contact who can install the widget.
- ☐ Set aside 30-45 minutes for data entry and 20-30 minutes for preview-answer review.
- ☐ Keep final documents, website links, images and spreadsheets in one folder before starting.
- ☐ Use business information that is current, authorised and suitable for customers.

### 15-DAY TRIAL

The trial begins when your bot is activated. Day 13 and Day 15 reminders explain how to continue on a paid plan. Trial activation does not bypass knowledge, safety or installation checks.

1

# Business and bot identity

These details establish who the bot represents, what it may do and when a human must take control.

|  |                                                                                                                             |
|--|-----------------------------------------------------------------------------------------------------------------------------|
|  | Legal business name, trading name, owner/authorised representative and GST/registration number, where applicable.           |
|  | Complete business address, Google Maps location link, website URL, public email, public phone and operating hours.          |
|  | Business category and selected bot: BusinessGPT, ClinicGPT, HotelGPT, DineGPT, eduGPT, PropertyGPT, FlowCart or Custom Bot. |
|  | One-sentence bot objective, such as: answer approved enquiries, qualify leads and request appointments.                     |
|  | Customer channels required: website widget, standalone bot link, WhatsApp API, or a combination.                            |
|  | Bot display name, welcome message, preferred language(s), tone and the team name used during handover.                      |
|  | Named AI Bot Admin who will review conversations, knowledge gaps, feedback and day-to-day operations.                       |

## Brand assets

| ITEM            | RECOMMENDED FORMAT                 | NOTES                                                     |
|-----------------|------------------------------------|-----------------------------------------------------------|
| Logo            | PNG or SVG; transparent background | Clear at small widget size                                |
| Business photos | JPG/WebP; sharp, current           | Exterior, interior, products, rooms, campus or properties |
| Brand colours   | HEX values, if available           | Primary, secondary and accessible contrast                |
| Google location | Published Maps link                | Confirm pin and displayed business name                   |

## Authority boundaries

State what the bot may answer, recommend, qualify or prepare. Separately list actions that require human approval - for example medical judgment, legal conclusions, negotiated prices, refunds, payment approval, room confirmation without live inventory, or access to private student/customer data.

2

# Approved knowledge to prepare

AiFrogi answers from approved business sources. More content is not automatically better; current, specific and internally consistent content is better.

|  |                                                                                                                        |
|--|------------------------------------------------------------------------------------------------------------------------|
|  | Official website pages and active links. Remove old, duplicate, private or unpublished URLs from the submission.       |
|  | Services/products with descriptions, eligibility, inclusions, exclusions, price or price rules, and effective dates.   |
|  | Frequently asked questions and the exact approved answer for each.                                                     |
|  | Policies: cancellation, refund, delivery, appointment, booking, privacy, child/minor data, emergency and escalation.   |
|  | Customer journey: common enquiry, qualification questions, next step, confirmation language and human handover point.  |
|  | Contact details and hours, including who handles sales, support, reservations, admissions or emergencies.              |
|  | Excel/CSV imports with one fact per row, clear column names, source, owner, last reviewed date and expiry/review date. |

## Category-specific preparation

| BOT                    | PREPARE THESE ITEMS                                                                                                                                              |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>ClinicGPT</b>       | Treatments, practitioner/clinic hours, appointment duration, available-slot source, fees, preparation instructions, cancellation rules and emergency disclaimer. |
| <b>HotelGPT</b>        | Room types, occupancy, amenities, meal plans, policies, check-in/out, local information, rate rules and PMS/channel-manager connector owner.                     |
| <b>DineGPT</b>         | Menu, prices, hours, table rules, party sizes, dietary/allergen statements, delivery zones, reservation policy and event-enquiry process.                        |
| <b>eduGPT</b>          | Programmes, eligibility, fees, schedules, locations, counselling process, admission dates, required documents and minor-data restrictions.                       |
| <b>PropertyGPT</b>     | Approved listings, location, configuration, area, price/range, amenities, availability status, visit process and legal-information boundaries.                   |
| <b>FlowCart</b>        | Catalogue/SKU, variants, prices, tax, stock source, delivery/collection, payment-link process, order changes and return/refund policy.                           |
| <b>Business/Custom</b> | Services, lead fields, qualification rules, workflow steps, approvals, response SLA and the connector action contract.                                           |

### IMPORTANT

If two approved sources conflict, the affected claim is paused. AiFrogi must not guess which version is correct. Your authorised owner must resolve the conflict before publication.

3

# Installation and connector readiness

Prepare access and ownership without sharing sensitive credentials in onboarding forms, email or chat.

- ☐ Identify the website platform: WordPress, Shopify, custom HTML/JavaScript, React/Next.js, another CMS, or no website.
- ☐ Nominate the person who can add the AiFrogi script/iframe or WordPress code and publish the change.
- ☐ Confirm where the widget should appear and provide staging/test access if available.
- ☐ Confirm website domain, Content Security Policy or cookie/consent requirements that may affect embedding.
- ☐ For a standalone link, confirm business name, logo, preferred URL label and QR-code use.
- ☐ List each connector required: calendar, Google Sheet, CRM, PMS/channel manager, catalogue, payment provider, email or another API.
- ☐ For every connector, name the provider, account owner, intended read/write actions, approval boundary and test environment.
- ☐ Keep OAuth/admin access available for the authorised owner during the guided connection step. Do not send passwords or OTPs.

## Connector truth rules

| READ                                                                                                   | WRITE                                                                                            | FAILURE                                                                                                |
|--------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|
| Live data such as slots, inventory or status may be shown only when the approved connector returns it. | Bookings, orders, payments or updates require authority, idempotency and confirmation/read-back. | If verification fails, the bot records the request or hands over. It never claims an action succeeded. |

## Security and privacy preparation

- ☐ List personal data the bot may collect and the exact customer consent text.
- ☐ Define retention/deletion requirements and the authorised team members who may view conversations.
- ☐ Exclude passwords, OTPs, payment-card details, private medical/student records and unnecessary identity documents.
- ☐ Provide an approved privacy-policy link and any sector-specific notices required by your organisation.
- ☐ Define emergency, complaint, vulnerable-person, legal, payment and high-risk escalation routes.

4

# Preview approval and go-live

Your bot is activated only after the business owner reviews how approved facts sound in real customer conversations.

|                          |                                                                                                                          |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------|
| <input type="checkbox"/> | Test common questions, vague questions, spelling variations and follow-up questions.                                     |
| <input type="checkbox"/> | Test unavailable information, conflicting information and expired information.                                           |
| <input type="checkbox"/> | Test off-topic questions such as weather and identity questions such as 'Who are you?'                                   |
| <input type="checkbox"/> | Test category safety boundaries, human handover and the two-clarification loop limit.                                    |
| <input type="checkbox"/> | Test each connector in a safe test/demo environment, including duplicate submission and connector failure.               |
| <input type="checkbox"/> | Read the bot's actual answers - not only the source spreadsheet - and approve or correct each material journey.          |
| <input type="checkbox"/> | Confirm widget appearance on desktop and mobile, privacy notice, feedback control and human-contact option.              |
| <input type="checkbox"/> | Authorised owner gives final preview sign-off; technical contact confirms installation; Super Admin enables live status. |

## Final handover information

|                          |                                                 |
|--------------------------|-------------------------------------------------|
| <b>BUSINESS OWNER</b>    | Name / email / phone: _____                     |
| <b>AI BOT ADMIN</b>      | Name / email / phone: _____                     |
| <b>TECHNICAL CONTACT</b> | Name / email / phone: _____                     |
| <b>HUMAN HANDOVER</b>    | Team / hours / SLA: _____                       |
| <b>BOT + CHANNEL</b>     | Selected bot / website / link / WhatsApp: _____ |
| <b>TARGET DATE</b>       | Preview: _____ Proposed activation: _____       |

## READY TO ONBOARD?

Keep this checklist beside you while completing the AiFrogi onboarding form. If a required item is unavailable, mark it for review rather than entering an assumption.

AiFrogi is the AI Business Automation vertical of Webtechnosys. Support: [info@aifrogi.com](mailto:info@aifrogi.com) | +91 74105 82898
