

# Full Scale Project Guidebook

Frontend, backend, Super Admin, onboarding, Meta/WhatsApp integration, billing, security, deployment, and operating flow.

Version 2026-07-05

Operated by webtechnosys

15-day trial - not free forever

## AiFrogi

WhatsApp operations with clear next actions, controlled support access, and verified covered security controls.

## Executive snapshot

# What AiFrogi is

AiFrogi helps businesses run WhatsApp conversations, broadcasts, reminders, payments, forms, reviews, retargeting, and human-assisted AI workflows through the official WhatsApp Business Platform.

### Core promise

Turn WhatsApp customer conversations into the right next action while keeping people, consent, billing, and data boundaries clear.

### Brand truth

AiFrogi is the product. webtechnosys is the operating company. lead-os-ai is only a legacy technical path/process name.

### Trial rule

15 days only. After expiry, paid actions pause automatically while data remains preserved.

### Meta charges

Meta usage and AiFrogi platform fees remain separate in pricing and billing.

### Security claim

Use verified-for-covered-controls language. Never say fully secure or Meta endorsed.

### Support access

Customer data is not an open admin workspace. Access must be scoped, controlled, and auditable.

### Marketing style

Less text, more visual narration, real product screens, no fake logos.

### Operating standard

Every major release needs build, verifiers, health checks, and honest status.

## Guidebook contents

| Section               | What it covers                                                                      |
|-----------------------|-------------------------------------------------------------------------------------|
| 01 System flow        | Overall system, trial vs paid, prerequisites, Meta onboarding, live operations      |
| 02 Marketing frontend | Homepage, solutions, resources, SEO, security confidence, case studies              |
| 03 Customer app       | Dashboard, Inbox, campaigns, workflows, knowledge, billing, support, settings       |
| 04 Backend            | API routes, service layer, database models, webhook and automation runtime          |
| 05 Super Admin        | Customer health, onboarding blockers, billing risk, support, incidents, audit       |
| 06 Security           | Tenant boundaries, OTP, support grants, Meta signature enforcement, verified claims |
| 07 Operations         | Deployment, health, monitoring, backup, incident response, verification scripts     |
| 08 Roadmap            | Priority work, scaling controls, external proof, CI gate, integrations              |

### How to use this guide

Use this as the master operating guide. Public copy, backend behavior, security evidence, Super Admin process, and deployment runbooks should all agree with this document.

# 01. Complete system flow

The full AiFrogi journey from first website visit to live WhatsApp operations, billing, security, and Super Admin control.

## Overall system map

## End-to-end business journey

### Business rule

The customer can start as trial or paid, but both paths must pass ownership verification, prerequisites, Meta onboarding, template readiness, and first test before serious live operations.

## Trial vs paid signup

- Trial is not free forever; it is a 15-day evaluation window.
- After expiry, messaging, campaigns, automation, and new team invitations are refused server-side.
- Customer data remains preserved so upgrade or renewal is clean.

## Prerequisites before WhatsApp API onboarding

### Customer guidance

Do not ask for passwords, OTPs, permanent tokens, or app secrets. The customer only needs to prepare business access, number readiness, documents, consent proof, and the first practical WhatsApp use case.

## Meta onboarding and go-live

## Live operations loop

### Product experience

Broadcasts, chatbot, payments, forms, reviews, e-commerce retargeting, and reminders are not separate stories. They all return context to the same Inbox and next-action loop.

## Campaign compliance flow

### Compliance rule

Unapproved templates, missing consent, opted-out recipients, expired trial, exceeded plan limits, and frequency/quiet-hour blocks must be refused by the backend, not only hidden in the UI.

## Automation engine flow

### Automation principle

Build reliability before drag-and-drop design. A visual builder should come only after jobs, leases, retries, guardrails, and audit are stable.

## Security and customer-data boundary flow

### Confidence message

Customer conversations are not an open admin dashboard. AiFrogi separates workspaces, gates sensitive actions, requires OTP for privileged users, and verifies covered routes with repeatable tests.

## Backend runtime flow

## Super Admin operating loop

### Super Admin principle

Super Admin improves customer success by showing the right next action. It should not become unrestricted customer-data browsing.

## 02. Product guide

How the public site, customer app, backend, and Super Admin should work together.

## Marketing frontend guide

### Header nav

Home, Solutions, Onboarding, Integration, Resources, Pricing, Login, Start free trial.

### Visual style

Calm dark-purple brand, transparent logo, less text, product screenshots, graphical narration.

### Homepage

Benefit first. Avoid keyword stuffing. Highlight security, onboarding, pricing, case study, and mobile CTA.

### Solutions

Broadcast, chatbot, e-commerce retargeting, reminders, payment, forms, surveys, reviews.

### Resources

Use guides for SEO: API cost, onboarding checklist, consent, templates, comparisons, security.

### Trust

No fake logos. Use real case studies, honest Meta wording, and sample labels on illustrative data.

### Recommended homepage line

Turn WhatsApp chats into bookings, payments, reminders, reviews, and repeat customers.

## Customer app guide

### Dashboard

Daily action queue, workspace health, WhatsApp status, billing and onboarding signals.

### Inbox

Queue, conversation list, chat workspace, lead intelligence, AI suggestion, human handover.

### Campaigns

Approved template, consent proof, preview, test send, cost ceiling, send/schedule, analytics.

### Workflows

Automation jobs, queue health, due/retry/dead-letter states, safe manual demo actions.

### Knowledge

Documents, approved Q&A, conflicts, gaps, review actions, approved context for AI.

### Billing

15-day trial, plan, usage, invoices, pause state, paid plan choices, Meta fee separation.

### Support

Tickets and customer-controlled support access grants.

### Settings

Integrations, team roles, active sessions, session revocation, security controls.

### Onboarding

Prerequisites, owner labels, Meta status, templates, first test message, go-live proof.

## Backend and API guide

| Layer                         | Responsibility                                                               |
|-------------------------------|------------------------------------------------------------------------------|
| app/api/auth                  | Login, logout, registration, invitation, active sessions                     |
| app/api/integrations/whatsapp | Settings, validate, test, operator/template/bulk messages, webhooks          |
| app/api/campaigns             | Campaign runs, test contacts, scheduled campaign updates                     |
| app/api/automation            | Job queue, protected cron runner                                             |
| app/api/knowledge             | Knowledge settings, entries, documents, gaps                                 |
| app/api/onboarding            | Onboarding profile, documents, Meta connect/status                           |
| app/api/support               | Tickets and customer-controlled support access                               |
| app/api/admin                 | Super Admin customer and billing actions                                     |
| lib/services                  | Business logic for WhatsApp, leads, knowledge, onboarding, assets, dashboard |
| lib/repositories              | Database access boundary for domain objects                                  |

## Database model map

| Domain                 | Primary models                                                                             |
|------------------------|--------------------------------------------------------------------------------------------|
| Customer account       | Organization, Property, OrganizationMember, UserSession                                    |
| Onboarding             | OnboardingProfile, OnboardingCredential, OnboardingDocument, OnboardingActivity            |
| WhatsApp and leads     | WhatsAppIntegration, WhatsAppBotConfiguration, Lead, LeadMessage, LeadTag                  |
| Campaigns              | Campaign, CampaignRecipient                                                                |
| Automation             | AutomationJob                                                                              |
| Knowledge              | KnowledgeDocument, KnowledgeEntry, KnowledgeGap                                            |
| Billing and operations | BillingPlan, Subscription, BillingInvoice, UsageRecord, PlatformIncident, PlatformAuditLog |
| Support and assets     | SupportTicket, SupportTicketMessage, Asset, LeadAssetShare                                 |
| Metrics                | MetricDaily                                                                                |

### Database principle

New features should preserve tenant boundaries and use repositories/services instead of scattering direct database writes across UI components.

## Billing, trial, and entitlement rules

### Trial

15 days only. Not free forever.

### Pause

After trial expiry, paid actions pause automatically.

### Preserve

Data remains preserved for upgrade/recovery.

### Block

Messaging, campaigns, automation, and new team invites are refused server-side.

### Separate fees

AiFrogi platform fee, Meta charges, AI overage, services, taxes, adjustments.

### Manual first

Manual invoices/payment references now. Razorpay later through idempotent webhooks.

### Customer wording

Your trial runs for 15 days. If it expires before upgrade, paid actions pause automatically, but your workspace data remains preserved.

## Security posture and public wording

### Allowed public claim

AiFrogi enforces customer-controlled support access, tenant isolation, role-gated sensitive actions, privileged login OTP, and fail-closed Meta webhook security on the covered routes, verified by repeatable tests.

### Do say

Workspace-scoped data, role-gated sensitive actions, support access controlled and auditable.

### Do not say

Fully secure, bank-grade, Meta endorsed, or impossible for anyone to access data.

### Meta wording

Meta access verified for webtechnosys. Avoid endorsement-style badge copy.

### Customer warning

Never share Facebook password, email password, OTP, permanent token, or app secret.

### Evidence boundary

Say covered routes/covered controls. That is honest and stronger than vague claims.

### Next security work

CI gate, route coverage expansion, rate-limit audit, restore drill, external assessment later.

## Deployment and verification guide

| Item                | Value or command                                               |
|---------------------|----------------------------------------------------------------|
| Production VPS      | root@187.77.188.146                                            |
| Production path     | /var/www/lead-os-ai                                            |
| PM2 app             | lead-os-ai                                                     |
| Port                | 3011                                                           |
| Build               | npm run build                                                  |
| Prisma              | npm run db:generate; npx prisma db push                        |
| Client secret scan  | npm run verify:client-secrets                                  |
| Security boundaries | npm run verify:security-boundaries:fixtures                    |
| Restart             | AIFROGI_RELEASE= pm2 restart lead-os-ai --update-env; pm2 save |
| Health              | https://app.aifrogi.com/api/health/ready                       |

### Deployment rule

The production directory is not a normal Git checkout. Do not assume git pull on the server deploys changes.

## Monitoring, backup, and incident response

### Health

Monitor `/api/health/live` and `/api/health/ready`.

### PM2/Nginx

Watch restart count, 5xx rate, certificate expiry.

### Database

Watch PostgreSQL storage, connections, and backup freshness.

### WhatsApp

Watch webhook age, failed message events, template errors.

### Automation

Watch retry/dead-letter jobs and cron runner output.

### Backup

Encrypted daily backup, off-VPS replication, monthly restore drill.

### Incidents

Protect data first, assign owner, communicate known impact only.

### Recovery

Verify health after fix/rollback before declaring recovered.

### Evidence

Record restore drills, incidents, and remediation notes.

## SEO, resources, and trust content

### Homepage

Brand and conversion page. Avoid keyword stuffing.

### Resources

Rank with useful buyer guides and onboarding/cost education.

### Comparisons

AiFrogi vs alternatives, written fairly and without fake claims.

### India/UAE cost

Explain Meta usage plus AiFrogi platform fee clearly.

### Security guide

Explain data boundary, support access, OTP, webhook signatures in plain English.

### Case studies

Use real approval and evidence. Do not pretend related proof is independent.

### SEO strategy

Let resources and comparison pages carry search demand. Let the homepage carry clarity, confidence, and conversion.

## Operating checklist

| Frequency               | Checklist                                                                                                              |
|-------------------------|------------------------------------------------------------------------------------------------------------------------|
| Daily                   | Ready health, PM2 status, onboarding blockers, failed sends, automation dead letters, support tickets, trial expiry.   |
| Weekly                  | Campaign delivery, opt-outs, onboarding drop-off, invoices, audit logs, pricing/trial copy, homepage animation/source. |
| Monthly                 | Backup restore drill, deferred security review, integration requests, resource updates, testimonials, plan allowances. |
| Before release          | Typecheck, build, relevant verifier scripts, client-secret scan, health check, public page verification.               |
| Before paid acquisition | Manual browser journey, external alert webhook, off-VPS backup, restore drill, pricing clarity.                        |

## Priority roadmap

### 1. CI security gate

Make verifiers required before sensitive code merges.

### 2. External alerts

Configure alert webhook and off-VPS backup replication.

### 3. Restore drill

Record first production backup restore evidence.

### 4. Proof

Collect unrelated testimonials and approved case studies.

### 5. Integrations

Productize common integrations and reduce custom friction.

### 6. Razorpay

Add checkout/webhook reconciliation after pricing stabilizes.

### 7. Support reasons

Improve support access reason quality and display.

### 8. Forced logout

Add Super Admin platform-wide forced logout.

### 9. External audit

Pen test and SOC2/ISO readiness when enterprise demand justifies it.

# Glossary

| Term           | Meaning                                                          |
|----------------|------------------------------------------------------------------|
| AiFrogi        | Customer-facing product name                                     |
| webtechnosys   | Company/operator behind AiFrogi                                  |
| lead-os-ai     | Legacy/internal technical path and PM2 process name              |
| Workspace      | Customer business workspace, currently tied to Property          |
| Organization   | Customer account/company                                         |
| Super Admin    | AiFrogi platform operator                                        |
| WABA           | WhatsApp Business Account                                        |
| Template       | Meta-approved outbound message format                            |
| Service window | WhatsApp 24-hour customer-care reply window                      |
| Campaign       | Broadcast/template send to a consented audience                  |
| AutomationJob  | Durable backend job for scheduled or automated work              |
| Support grant  | Customer-controlled permission for scoped AiFrogi support access |
| Covered routes | API paths included in repeatable security verification           |

**The project is strongest when the product promise, backend behavior, public wording, and verification evidence all say the same thing.**
