

CRM / Custom API

Preparation checklist - send requirements, not passwords

Suitable workflows: PropertyGPT, BusinessGPT and Custom Bot

What this can enable

Read or update specifically approved CRM records and business actions. Features go live only after configuration, approval and successful testing.

What to prepare

1. Vendor, account owner, official API documentation and sandbox details.
2. Record types, field mappings, unique IDs and fictional sample requests/responses.
3. Authorised read/write actions, identity checks and permission boundaries.
4. API limits, failure contact, retry rules and measurable acceptance criteria.

Scope and exclusions

No unrestricted database access or arbitrary actions. Complex custom APIs, vendor certification and ongoing maintenance are separately scoped.

Setup and ongoing costs

CRM INR 5,000-8,000; custom API INR 8,000-15,000 indicative. One-time estimate, not an automatic charge. Final scope and price require your written approval before work begins.

Agreed setup covers configuration, field mapping, controlled tests and handover for the named workflow. Bot subscription, taxes, provider API/transaction fees, extra workflows and ongoing maintenance are separate unless included in your quotation.

Next step

Email the non-secret checklist details to info@aifrogi.com or call +91-7410582898. We confirm scope and permissions, connect securely, test with your approval, then enable the workflow. Never email passwords, API secrets, OTPs or real sensitive customer records.
