

Shopify / WooCommerce

Preparation checklist - send requirements, not passwords

Suitable workflows: FlowCart and ecommerce journeys

What this can enable

Read approved catalogue/order information and perform only the agreed store actions. Features go live only after configuration, approval and successful testing.

What to prepare

1. Store URL, platform name/version and authorised store administrator.
2. API access availability, required permissions and a sandbox or safe test store.
3. Product variants, stock source, shipping/tax rules and sample fictional order IDs.
4. Decide read-only vs write actions, customer verification, cancellation and returns rules.

Scope and exclusions

No full store migration, theme development or unrestricted order access. Checkout, refunds, stock writes and custom plugins require explicit scope and acceptance tests.

Setup and ongoing costs

INR 5,000-8,000. One-time estimate, not an automatic charge. Final scope and price require your written approval before work begins.

Agreed setup covers configuration, field mapping, controlled tests and handover for the named workflow. Bot subscription, taxes, provider API/transaction fees, extra workflows and ongoing maintenance are separate unless included in your quotation.

Next step

Email the non-secret checklist details to info@aifrogi.com or call +91-7410582898. We confirm scope and permissions, connect securely, test with your approval, then enable the workflow. Never email passwords, API secrets, OTPs or real sensitive customer records.
