

Google Calendar

Preparation checklist - send requirements, not passwords

Suitable workflows: ClinicGPT, BusinessGPT, eduGPT and appointment workflows

What this can enable

Check availability and manage appointments within the approved booking workflow. Features go live only after configuration, approval and successful testing.

What to prepare

1. Calendar owner and calendar ID, plus the authorised account for connection.
2. Appointment types, duration, time zone, opening hours and blocked times.
3. Buffers, capacity, cancellation and rescheduling rules.
4. Required customer details and a safe test slot approved by the calendar owner.

Scope and exclusions

A calendar connection alone does not supply patient history, payments or hotel room inventory. A booking is confirmed only after the provider verifies success.

Setup and ongoing costs

INR 1,500-2,500. One-time estimate, not an automatic charge. Final scope and price require your written approval before work begins.

Agreed setup covers configuration, field mapping, controlled tests and handover for the named workflow. Bot subscription, taxes, provider API/transaction fees, extra workflows and ongoing maintenance are separate unless included in your quotation.

Next step

Email the non-secret checklist details to info@aifrogi.com or call +91-7410582898. We confirm scope and permissions, connect securely, test with your approval, then enable the workflow. Never email passwords, API secrets, OTPs or real sensitive customer records.
