

Google Sheets

Preparation checklist - send requirements, not passwords

Suitable workflows: BusinessGPT, eduGPT and enquiry-record workflows

What this can enable

Record approved enquiries and read permitted business records. Features go live only after configuration, approval and successful testing.

What to prepare

1. Spreadsheet link, tab names, column headings and 3 fictional example rows.
2. A unique record ID; required fields; who can view or update each field.
3. An authorised Google account owner and agreed access permissions.
4. Retention rules and the human contact to handle failed updates.

Scope and exclusions

No automatic access to every tab. Sensitive student or patient records require identity verification and separately approved access controls.

Setup and ongoing costs

INR 1,500-2,500. One-time estimate, not an automatic charge. Final scope and price require your written approval before work begins.

Agreed setup covers configuration, field mapping, controlled tests and handover for the named workflow. Bot subscription, taxes, provider API/transaction fees, extra workflows and ongoing maintenance are separate unless included in your quotation.

Next step

Email the non-secret checklist details to info@aifrogi.com or call +91-7410582898. We confirm scope and permissions, connect securely, test with your approval, then enable the workflow. Never email passwords, API secrets, OTPs or real sensitive customer records.
