Preparation checklist - send requirements, not passwords

Suitable workflows: HotelGPT

What this can enable

Use provider-authorised room availability and reservation actions when certified for your property. Features go live only after configuration, approval and successful testing.

What to prepare

1. Vendor/product name, property ID, account owner and vendor technical contact.
2. Official API documentation, API plan eligibility and sandbox access if available.
3. Room/rate mappings, occupancy, taxes, cancellation policies and source of truth.
4. Permitted reservation actions and vendor-approved test data; no guest database by email.

Scope and exclusions

Not every vendor offers API access. Certification, vendor charges, custom mappings and multi-property work may change the quotation. A website crawl cannot establish live availability.

Setup and ongoing costs

Indicative INR 8,000-15,000. One-time estimate, not an automatic charge. Final scope and price require your written approval before work begins.

Agreed setup covers configuration, field mapping, controlled tests and handover for the named workflow. Bot subscription, taxes, provider API/transaction fees, extra workflows and ongoing maintenance are separate unless included in your quotation.

Next step

Email the non-secret checklist details to info@aifrogi.com or call +91-7410582898. We confirm scope and permissions, connect securely, test with your approval, then enable the workflow. Never email passwords, API secrets, OTPs or real sensitive customer records.
