

Razorpay

Preparation checklist - send requirements, not passwords

Suitable workflows: FlowCart and approved payment workflows across the bot family

What this can enable

Initiate agreed payment requests and verify provider-confirmed payment status. Features go live only after configuration, approval and successful testing.

What to prepare

1. Authorised Razorpay account administrator and account activation status.
2. Purpose, currency, approved amounts, order reference and receipt requirements.
3. Document the cancellation/refund policy and who may authorise refunds.
4. Arrange secure test credentials and webhook configuration during assisted setup; never email secrets.

Scope and exclusions

No payment is treated as successful from a browser redirect alone. Automated refunds and custom settlement logic need separate approval. Standard Razorpay onboarding is included only within the INR 4,500 WhatsApp setup scope; do not pay twice for the same agreed work.

Setup and ongoing costs

Custom flow: INR 5,000-8,000. One-time estimate, not an automatic charge. Final scope and price require your written approval before work begins.

Agreed setup covers configuration, field mapping, controlled tests and handover for the named workflow. Bot subscription, taxes, provider API/transaction fees, extra workflows and ongoing maintenance are separate unless included in your quotation.

Next step

Email the non-secret checklist details to info@aifrogi.com or call +91-7410582898. We confirm scope and permissions, connect securely, test with your approval, then enable the workflow. Never email passwords, API secrets, OTPs or real sensitive customer records.
