

CLIENT INSTALLATION GUIDE

AI Bot connector and installation guide

A simple guide for choosing the right AiFrogi bot, preparing approved knowledge and connecting external systems safely.

Start with the bot.

Every AiFrogi bot can begin with approved knowledge, a website widget and human handover. A connector is only required when the bot must read live information or confirm an action in another system.

Your installation path

Step	What happens	Your action
1	Choose	Select the AI Bot that matches your customer journey.
2	Prepare	Provide approved business details, FAQs and public source links.
3	Review	Approve the bot's conversational preview before publication.
4	Install	Add the website script, WordPress block or use the standalone link.
5	Connect	Enable only the verified connectors required for live actions.
6	Go live	AiFrogi completes final readiness and monitors the launch.

The standard website installation

Complete the bot foundation first. The same foundation is used whether you add a connector now or later.

What AiFrogi provides	What your team does
Website JavaScript snippet	Paste it before the closing tag or in your website's approved footer-code area.
WordPress option	Add the same snippet through a Custom HTML block, header/footer-code plugin or your developer's approved method.
Standalone link	Use it for QR codes, social profiles, WhatsApp bio links, SMS or a website-free launch.
Preview and readiness checks	Approve approved answers. Do not request live claims or actions until the relevant connector is verified.

Before you upload

Use the AiFrogi onboarding Excel file or complete details in your workspace. Include public, approved information only: business identity, contact details, services, FAQs, business hours, human-handover contact and approved source pages. Imported FAQ answers are staged for review; they do not go live automatically.

Never send credentials.

Do not put passwords, OTPs, private API keys, payment-card details or secret tokens in the Excel workbook or email. Connector access is configured separately through secure, scoped setup.

Which connector does each bot need?

The first two columns help a customer decide what is needed for a knowledge-led launch. The final column is the boundary: without a verified connector, the bot must capture a request or hand over instead of claiming the live outcome.

AI Bot	Works before connector	Primary connector	Live action enabled
BusinessGPT	Business questions, lead qualification and human handover.	CRM or Google Sheets	Live CRM lead sync or confirmed consultation booking.
ClinicGPT	Clinic information and appointment requests. Medical advice remains with the clinic.	Google Calendar or clinic system	Live slots, appointment confirmation, reschedule/cancellation and verified deposit status.
HotelGPT	Property information and stay enquiries.	PMS, channel manager or booking engine	Live availability, rates, restrictions, booking holds and verified booking status.
DineGPT	Menu questions and reservation requests. It never guesses allergen data.	Reservation system or Google Calendar	Live table capacity, confirmed reservations and verified deposits.
PropertyGPT	Approved listings, buyer qualification and site-visit requests.	Property CRM or inventory system	Live listing status, agent assignment and confirmed site visits.
eduGPT	Programme information, admissions enquiries and counselling requests.	Admissions CRM or Google Sheets	Consented enquiry sync and confirmed counselling/campus visits.
FlowCart	Approved catalogue and product enquiries.	Shopify or WooCommerce	Live price/stock, cart/order creation, payment and fulfilment confirmation.
Custom Bot	A governed workflow based on approved knowledge and a defined authority model.	Client system of record	Only the exact read/write actions documented and tested for the customer.

BOT CONNECTOR REQUIREMENT

BusinessGPT

Business questions, lead qualification and human handover.

Primary connector	Optional extension
CRM or Google Sheets	Consultation calendar
Live CRM lead sync or confirmed consultation booking.	The bot can answer from approved knowledge, capture the customer request and hand it to your team. It will not invent availability, status, confirmation or payment success.

Connector setup checklist

1. Confirm the business owner and authorised system administrator. 2. Define exact read and write actions. 3. Connect through the approved secure flow. 4. Test sandbox or controlled data. 5. Verify read-back, error handling and human handover. 6. Enable the action only after AiFrogi approval.

BOT CONNECTOR REQUIREMENT

ClinicGPT

Clinic information and appointment requests. Medical advice remains with the clinic.

Primary connector	Optional extension
Google Calendar or clinic system	Google Sheets; payment gateway
Live slots, appointment confirmation, reschedule/cancellation and verified deposit status.	The bot can answer from approved knowledge, capture the customer request and hand it to your team. It will not invent availability, status, confirmation or payment success.

Connector setup checklist

1. Confirm the business owner and authorised system administrator. 2. Define exact read and write actions. 3. Connect through the approved secure flow. 4. Test sandbox or controlled data. 5. Verify read-back, error handling and human handover. 6. Enable the action only after AiFrogi approval.

BOT CONNECTOR REQUIREMENT

HotelGPT

Property information and stay enquiries.

Primary connector	Optional extension
PMS, channel manager or booking engine	Payment gateway
Live availability, rates, restrictions, booking holds and verified booking status.	The bot can answer from approved knowledge, capture the customer request and hand it to your team. It will not invent availability, status, confirmation or payment success.

Connector setup checklist

1. Confirm the business owner and authorised system administrator. 2. Define exact read and write actions. 3. Connect through the approved secure flow. 4. Test sandbox or controlled data. 5. Verify read-back, error handling and human handover. 6. Enable the action only after AiFrogi approval.

BOT CONNECTOR REQUIREMENT

DineGPT

Menu questions and reservation requests. It never guesses allergen data.

Primary connector	Optional extension
Reservation system or Google Calendar	Deposit payment provider
Live table capacity, confirmed reservations and verified deposits.	The bot can answer from approved knowledge, capture the customer request and hand it to your team. It will not invent availability, status, confirmation or payment success.

Connector setup checklist

1. Confirm the business owner and authorised system administrator. 2. Define exact read and write actions. 3. Connect through the approved secure flow. 4. Test sandbox or controlled data. 5. Verify read-back, error handling and human handover. 6. Enable the action only after AiFrogi approval.

BOT CONNECTOR REQUIREMENT

PropertyGPT

Approved listings, buyer qualification and site-visit requests.

Primary connector	Optional extension
Property CRM or inventory system	Site-visit calendar
Live listing status, agent assignment and confirmed site visits.	The bot can answer from approved knowledge, capture the customer request and hand it to your team. It will not invent availability, status, confirmation or payment success.

Connector setup checklist

1. Confirm the business owner and authorised system administrator. 2. Define exact read and write actions. 3. Connect through the approved secure flow. 4. Test sandbox or controlled data. 5. Verify read-back, error handling and human handover. 6. Enable the action only after AiFrogi approval.

BOT CONNECTOR REQUIREMENT

eduGPT

Programme information, admissions enquiries and counselling requests.

Primary connector	Optional extension
Admissions CRM or Google Sheets	Counselling calendar
Consented enquiry sync and confirmed counselling/campus visits.	The bot can answer from approved knowledge, capture the customer request and hand it to your team. It will not invent availability, status, confirmation or payment success.

Connector setup checklist

1. Confirm the business owner and authorised system administrator. 2. Define exact read and write actions. 3. Connect through the approved secure flow. 4. Test sandbox or controlled data. 5. Verify read-back, error handling and human handover. 6. Enable the action only after AiFrogi approval.

BOT CONNECTOR REQUIREMENT

FlowCart

Approved catalogue and product enquiries.

Primary connector	Optional extension
Shopify or WooCommerce	Razorpay or approved payment provider
Live price/stock, cart/order creation, payment and fulfilment confirmation.	The bot can answer from approved knowledge, capture the customer request and hand it to your team. It will not invent availability, status, confirmation or payment success.

Connector setup checklist

1. Confirm the business owner and authorised system administrator. 2. Define exact read and write actions. 3. Connect through the approved secure flow. 4. Test sandbox or controlled data. 5. Verify read-back, error handling and human handover. 6. Enable the action only after AiFrogi approval.

BOT CONNECTOR REQUIREMENT

Custom Bot

A governed workflow based on approved knowledge and a defined authority model.

Primary connector	Optional extension
Client system of record	Defined per workflow
Only the exact read/write actions documented and tested for the customer.	The bot can answer from approved knowledge, capture the customer request and hand it to your team. It will not invent availability, status, confirmation or payment success.

Connector setup checklist

1. Confirm the business owner and authorised system administrator. 2. Define exact read and write actions. 3. Connect through the approved secure flow. 4. Test sandbox or controlled data. 5. Verify read-back, error handling and human handover. 6. Enable the action only after AiFrogi approval.

What happens after a connector request

AiFrogi treats each connector as a governed operational change. Connecting a system does not automatically give the bot authority to act.

Stage	AiFrogi control	Customer responsibility
Scope	Records required actions, allowed data and safe fallback.	Name the authorised owner and system of record.
Connect	Configures secure scoped access without exposing credentials in chat or email.	Approve the provider connection using the provider's official flow.
Test	Checks read data, write idempotency, error handling and human handover.	Provide controlled test records and confirm expected outcomes.
Approve	Records connector readiness and action boundary.	Approve that the business rules and customer-facing messages are correct.
Operate	Monitors errors and disables unsafe actions when required.	Keep business information and provider access current.

Need help?

For onboarding or a connector discussion, contact AiFrogi at info@aifrogi.com or WhatsApp **+91-7410582898**. Please mention your bot category, website and the system you want to connect.
