

Prepare your connector

Customer checklist | Version 2 | 28 September 2026

Start with these details

Business name, website, AiFrogi account email, bot category, authorised owner and technical contact. Tell us what the bot should read, what it may change, business hours, timezone, expected usage and the fallback contact.

Google Sheets

Provide the spreadsheet link, worksheet names, column headings and fictional sample rows. Identify the row key (for example, booking ID), who maintains the data and the fields the bot may read or update. Confirm data-retention requirements. Authorise access through the approved Google connection; do not share your Google password.

Google Calendar

Name the calendar and account owner. Provide appointment types, duration, working days, timezone, breaks, buffer time, capacity, cancellation rules and required customer details. Use controlled test appointments before enabling live bookings.

Razorpay

Provide your business account status, test-mode availability, currency, payment purpose, amount rules and receipt/refund requirements. Name the authorised account administrator. Test credentials and webhook secrets must be entered through a secure setup channel agreed with AiFrogi, never in this document, email or chat. Live payment actions need separate testing and approval.

PMS / channel manager / custom API

Provide vendor and product name, property/location identifiers, API documentation link, vendor technical contact and sandbox availability. Specify room/rate mappings, availability rules and allowed reservation actions. Confirm whether vendor approval or a paid API plan is required. Never include guest records in an initial email.

Audio + Translator

Provide the bot name, guest languages, staff output language and browsers/devices to support. Confirm microphone-consent wording, whether audio may be retained (default: no), transcript review requirements and the human fallback. AiFrogi provides a Wispr-style voice-input experience; it is an independent capability and is not affiliated with or endorsed by Wispr.

Scope, charges & approval

Indicative published connector ranges

Simple (Google Sheets / Calendar): INR 1,500-2,500 one time.

Complex (CRM, ecommerce, custom payment flow): INR 5,000-8,000 one time.

Audio + Translator: INR 7,500 one time per bot, including configuration and go-live testing.

High complexity (PMS, channel manager, custom API): INR 8,000-15,000 indicative one time.

These are current published ranges, not a binding quote or a guarantee that every integration fits the range. Final scope and price must be approved before work begins.

What the written quotation must include

The exact business account, connector and workflow; permitted read/write actions; field mapping; configuration; controlled testing; acceptance criteria; expected completion dependencies; handover; and the period of post-setup support. Extra workflows, vendor changes and ongoing maintenance are separately agreed, not silently included.

Separate charges

The AI Bot subscription, applicable taxes, provider API/transaction fees and custom maintenance remain separate unless the quotation expressly includes them. For Audio + Translator, current reference provider rates start at USD 0.017 per audio minute for transcription or USD 0.034 per audio minute for live translation; the selected mode is billed at actual provider usage and rates may change. WhatsApp standard onboarding currently has a separate INR 4,500 setup scope; do not assume that fee applies to every web-bot connector. Avoid duplicate charges for work already included in an approved package.

Bot usage

Trial: 15 days, 100 AI replies and 500 total messages.

Starter: INR 499 monthly or INR 4,999 yearly; published allowance of 1,000 AI replies and 5,000 total messages. Confirm the allowance reset period in your order.

Additional usage requires a disclosed price and your approval before purchase. No usage-pack rate is promised in this guide. Review current pricing at <https://aifrogi.com/pricing>.

Approval before live actions

1. Agree the scope and quotation.
2. Authorise scoped access securely.
3. Test with fictional or explicitly approved records.
4. Check success, duplicate handling, failure and cancellation behaviour.
5. Approve the workflow before live activation. A connected account alone does not certify a live action.

Send requirements - not secrets

Email info@aifrogi.com or call +91-7410582898. Send business requirements and public documentation only. Do not email passwords, OTPs, API keys, patient records or payment-card details.
